

Dear Valued PolyScience Customer:

July 2012

In keeping with PolyScience commitment of reviewing and enhancing product designs, our 1.5 HP Chiller models #6860 and #6960 (230/1/60) now come fitted with a 30 amp power cord and plug, for connection to a NEMA 6-30R (North America) receptacle.

Our models #6850 and #6950 (240/1/50) are fitted with a 6 ft power cord with flying leads for attachment to an appropriate plug or permanent connection to the power source, in accordance with local electrical codes.

Three phase units are not included in this design enhancement and will continue to be fitted with a junction box for hard wiring.

This change is effective on products manufactured after July 1, 2012. We trust that you appreciate our commitment to product quality.

Sincerely,

Wayne Walter  
Managing Director  
PolyScience
